Typography and emphasis

Times New Roman is used for presentation text. A sentence can contain **bold**, *italic*, and highlighted text.

Key message

Standard blocks use the theme colours.

Lists and hierarchy

- First point in the presentation
- Second point with a nested list:
  - Supporting detail
  - Another detail

1. Define the problem.
2. Present the evidence.
3. Discuss the implications.

1 Typography and lists

3 Results and references

Block styles

Standard block

Use for a central idea or definition.

Finding

Evidence is presented in a distinct example block.

Important

Use emphasis sparingly for a key limitation.

Mathematical expressions

Inline notation: $x_t \in \mathbb{R}^d$, with parameter vector θ.

$$\hat{y}_{t+1} = f_\theta(x_t), \qquad \mathcal{L}(\theta) = \frac{1}{n}\sum_{i=1}^{n}(y_i - \hat{y}_i)^2. \tag{1}$$

Definition

The loss measures mean squared prediction error.

A theorem and a proof

Theorem (Cauchy–Schwarz inequality)

For vectors $x, y \in \mathbb{R}^n$,

$$|x^{\mathrm{T}} y| \leq \|x\|_2 \|y\|_2.$$

Proof.

The result follows from the non-negativity of $\|x - ty\|_2^2$. □

1 Typography and lists

2 Blocks and mathematics

3 Results and references

Example results

Finding

A compact result can sit beside a table.

Method	Score
Baseline	0.72
Proposed	0.84

Scores are illustrative and do not represent experimental results.

Quotation and citation

> *A concise quotation or observation can be displayed with indentation.*

A typical in-text reference appears here [1].
